PROFESSIONAL SUMMARY

Statistical quantitative analyst with a master's degree in Statistics and 3 years of full-time experience using Python, R, SQL, and SAS to clean and preprocess historical data, analyze time series, build forecasting and regression models, assess risk, and communicate actionable recommendations. Experienced in timely ad hoc analysis, audit-ready reporting, and protecting data integrity in regulated and operational environments—transferable strengths for load research, peak forecasting, system planning.

EDUCATION

Columbia University

September 2024 - December 2025

Master's, Statistics

- Relevant coursework: Databases, Neural Networks and Deep Learning, Linear Regression Models, Nonparametric Statistics, Survival Analysis, A/B Testing, Statistical Machine Learning, Probability and Statistical Inference, Causal Inference, Algorithms, and Bayesian Statistics.

Pennsylvania State University - University Park

August 2019 - December 2021

Bachelor's, Statistics

- Dean's List (2019). Relevant coursework: Computational Data Science, Probability Theory, Mathematical Statistics, Time Series, Regression Analysis, Analysis of Variance, Computer Programming, SAS, Hypothesis Testing, and Accounting and Financial Management.

PROFESSIONAL EXPERIENCE

United Nations

January 2026 - July 2026

Data Research Intern

New York, NY, USA

- Consolidated five years of fragmented flight operational records into a centralized, SQL Server-backed metadata repository for ongoing maintenance and analysis.
- Migrated and reconciled two years of historical records using Python-based schema mapping, entity resolution, deduplication, and source-to-target validation while preserving traceability to legacy files.
- Designed data dictionaries, naming standards, validation rules, and governance controls for reporting periods, required fields, duplicate records, referential integrity, and status classifications; created automated workflows to enforce these controls across data intake and reporting.
- Developed and presented real-time Power BI dashboards for fleet availability, GPS tracking, utilization, maintenance alerts, and operational risk, enabling management to identify trends and prioritize actions.

Columbia University

September 2025 - Present

Data Science Researcher

New York, NY, USA

- Built an R-based data pipeline to clean, transform, impute, and analyze high-frequency pediatric EHR data—including blood pressure readings, laboratory results, ICD codes, and nursing flowsheets—creating a reliable patient- and reading-level dataset for deterioration modeling.
- Engineered and validated age-specific hypotension features using AHA/PALS clinical thresholds, corrected continuous-age calculations, and distinguished transient reading-level hypotension from patient-level outcomes, improving the clinical interpretation of blood-pressure patterns.
- Developed and evaluated statistical and machine-learning models, including linear and logistic regression, penalized regression, gradient boosting, and XGBoost, and presented visualizations and interim results to the pediatric study team to support evidence-based hypotension thresholds.

Around Technologies Inc.

September 2025 - Present

Machine Learning Engineer

New York, NY, USA

- Developed and deployed machine-learning forecasting models for delivery ETA prediction in the launch application, linking model outputs to business performance reporting.
- Designed user-level A/B testing metrics and SQL pipelines that integrated behavioral data for granular trend, correlation, and risk analysis.

- Led analytics reporting for a phase-one product launch and presented dashboards, forecasts, profit-impact analyses, and recommendations to executives and shareholders.
- Built scalable PyTorch data and modeling scrape pipelines that reduced training time from six hours to 3.9 hours and lowered annual cloud costs.

Columbia University

January 2025 - May 2025

Research Intern

New York, NY

- Analyzed high-dimensional DNA-sequencing data in R, performing quality-control assessment and visualizing sequencing reads, genetic variation, and structural changes.
- Developed R-based simulations to evaluate mathematical and statistical methods for interpreting genetic mechanisms and disease pathways.
- Applied Approximate Bayesian Computation with random forests and sequential Monte Carlo methods to infer parameters and quantify uncertainty in high-dimensional genetic datasets.

JN Data Resolution LLC

February 2024 - August 2024

Statistical Programmer

Florham Park, NJ, USA

- Produced data visualizations using SAS, R/R Shiny, using R& SQL, quality review of programs coded by other programmers, and checked for data consistency.
- Produced and peer-reviewed statistical analyses and visualizations with SAS, R, and SQL; applied regression, categorical, time-to-event, and mixed-model methods to safety and efficacy data.
- Validated safety and efficacy datasets using SAS macros in CDISC structure and decided on analysis methods based on data structures and analysis objectives.

Clinpharma Clinical Research LLC

June 2023 - February 2024

SAS Programmer

Princeton, NJ, USA

- Utilized large-scale datasets to generate statistically motivated research hypotheses, applying advanced statistical methods using R and SAS to rigorously test and evaluate research hypotheses.
- Conducted experimental design and performed advanced statistical analyses for pharmaceutical research, utilizing R for data simulation, model development, and visualization, and SAS for regulatory-compliant reporting and validation.
- Developed and implemented a risk-based and flexible approach to Quality Assurance (QA) using R for statistical modeling and data visualization, and SAS for compliance reporting, ensuring adherence to applicable regulatory requirements.

Yangtze River Consulting LLC

August 2022 - June 2023

SAS Programmer

Lawrenceville, NJ, USA

- Created new datasets from raw data files using Import Techniques and modified existing datasets using Set, Merge, Sort, Update, and conditional statements.
- Generated Ad-Hoc reports including tables, listings and graphs outputs in HTML, RTF, PDF files for meetings and progress reports.

AWARDS

- Awarded Top Finalist at ENAR for machine learning research on hypertension using NHANES data in March 2025.
- Won 3RD Place, sponsored by NVidia, Amazon in 2025 NSF LEAP "Harnessing Machine Learning to Improve Subseasonal-to-Seasonal Climate Predictions" Hackathon.

SKILLS

Skills: Python, Pytorch, R, SAS, Tableau, AWS, Business Analytics, Database Engineer, EDA, ETL, Excel, Machine Learning, MySQL, Neural Networks, NLP, Operations Research, Power BI,
